

## ***Character Selection and Exploration Scenario***

### **Group 6 - Shaan Kohli, Brian Rosca, Victoria Rossi, Hristian Tountchev**

In this scenario, Greedy Dwarf evolves by introducing enterable Points of Interest (POIs), a player login system with both global and personal leaderboards, and a character selection feature. Players can dive deeper into the lair's mysteries, explore hidden rooms, and face new challenges. The game tracks progress and high scores, allowing players to compete globally and monitor their personal achievements over time.

### **Scenario 2: "The Deeper Secrets of the Dragon's Lair"**

The player starts the game by launching it from the main menu, which includes the following options: **Start Game**, **Instructions**, and the new **Leaderboards** button.

#### **Main Menu Enhancements**

The new **Leaderboards** feature allows players to:

- **View Global Leaderboard:**
  - Displays high scores from all usernames entered.
  - Shows usernames, total scores, and rankings.
  - Fosters a competitive environment by showcasing top performers.
- **Search Personal Leaderboard:**
  - Players can search for a specific username to view high scores associated with that username.
  - Displays the player's own high scores, dates achieved, and characters used.
  - Allows players to track their progress and set personal goals.

#### **Starting the Game with New Features**

##### **1. Entering Username:**

- Upon selecting **Start Game**, the player is now prompted to enter a username.
- The username is used to track the player's scores and progress.
- If the username already exists, the system will recognize it and update the existing profile.
- If it's a new username, the system creates a new local profile for the player.

##### **2. Character Selection:**

- After entering the username, the player proceeds to the **Character Selection** screen.
- They can choose from different dwarves, each with unique attributes:
  - **Miner Dwarf:** Higher carrying capacity but slower movement speed.
  - **Scout Dwarf:** Faster movement speed but lower carrying capacity.
  - **Warrior Dwarf:** Balanced speed and carrying capacity.
- Each character comes with a brief description and visual representation.
- The player selects their preferred character, and the system saves this choice to their profile.
- The next time the player launches the game, instead of seeing the **Character Selection** screen, they'll encounter a **Confirmation** screen. Here, they can either confirm their previous character choice or opt to select a different character.

### **Enterable Points of Interest (POIs)**

As the dwarf explores the lair, they encounter various POIs. These POIs are special locations that the player can enter to find unique challenges and rewards.

- **Entering a POI:**
  - To enter a POI, the player moves onto the POI's entrance tile.
  - A prompt appears: "Press 'E' to enter [POI Name]."
  - Pressing 'E' transitions the player into the POI.
- **Inside a POI:**
  - Each POI is a new map with a different layout and new treasures to discover. Just as the dragon follows the dwarf, it can also enter the POI.
  - The behavior inside the POI is the same as on the main map. When the dwarf collects treasures, its weight will increase and its speed will be reduced. The dragon can still catch the dwarf, and in order to finish the game, the user will have to go back to the main map to access the exit door.
  - The dwarf can pick up various items inside the POI, which include the same loot pool as before. Additionally, the dwarf can also pick up keys from different POIs, which requires navigating to a secondary location to open a door which opens potentially more rewarding loot.

- The dwarf can also drop items at any time, and they will be randomly placed on the map where the user is standing. If the dwarf is inside a POI, the item will be dropped inside that same POI.
- **Exiting a POI:**
  - To exit a POI, the dwarf moves back to the tile where they were initially placed when they entered.
  - The following prompt appears: “Press 'E' to exit [POI Name].”
  - Pressing 'E' transitions the player back into the main map, at the same tile they were initially, just before they entered the POI.
